PRICE LIST

Carroll D. Bush Nut Tree Nursery

Est. 1919

Barton - **Oregon**

This year my stocks of trees are limited and I am putting out a small list for the benefit of the many who wish for trees of the best nuts that the world affords.

Among these are the standard varieties of filberts, walnuts from China that grow in the colder sections, blight-resistant chestnuts that can be planted anywhere, and the world's finest nuts, the hickories.

FILBERTS

We have developed the Round Root Filbert Layer system of propagation. This is a system that gives, we believe, the smallest chance for sprouts of any filbert on its own roots. Sprouts from a Round Root are easily taken off and easily kept off. There are few sprouts that start.

Our filberts are not budded or grafted except where stated. They are on their own roots, which insures trees of same character throughout.

FILBERTS

Barcelona This is still the one dependable variety and is used for the main crop in this section. It should be planted with at least two pollinizers, the Daviana and DuChiliy. Very often a third, the White Aveline, is added to insure full crops.

Barcelona trees with pollinizers included, when ordered in quantities, priced as follows: Nursery grown.

	each	ten	hundred
2-3 foot trees.....	.45	.40	.30
3-4 foot trees.....	.50	.45	.40
Round root layers from orchard:			
2-4 foot trees.....	.35	.30	.25
4-6 foot trees.....	.40	.35	.30

DuChilly A long nut, often grown for itself, good bearer when planted with Gasaway, Clackamas and Alpha as pollinizers.

Trees, each.....**60**

Nottingham Very fine small nut. Trees produce heavily. Used as pollinizer in place of Daviana. Each.....**60**

Giant DeHall Very large nut. Round type. Trees, each.....**60**

Clackamas Round nut, good size but valued as pollinizer for DuChilly. Trees, each.....**60**

SOME NEW FILBERTS

Giese Valued as a round nut that pollinizes the Barcelona. Can be picked up with it and sold with it. Trees, 4-6 ft. each **1.00**

Longfellow Known for some time but first year on market. Long nut. Fills nicely and drops from husk when ripe. Larger than DuChilly but would sell with that nut. Tree vigorous and promises to bear heavily. Small trees, each.....**1.00**

FILBERTS FOR EASTERN PLANTERS

On account of the cost of shipping many eastern planters who want to put out our filberts do not like to order from us. For these we are offering this year ten nursery grown trees, well rooted, one foot high, for \$3.00, POSTPAID. These are Barcelonas with proper pollinizers.

It comes to our attention that salesmen for other nurseries make extravagant claims for their trees. They have the only "true Barcelona;" their trees are sproutless and on their own roots. Needless to say nurseries would not dare put such claims in writing. Barcelona trees in this country all trace back to the same source. They are a good variety. There is probably not a true Barcelona in the country as that variety is known in Europe. All nut tree specialists are growing trees fairly free from sprouting.

When any salesman makes extravagant claims for his filberts and runs down other growers he is not telling the truth. Forget him.

CHESTNUTS

About twenty million pounds of Chestnuts are imported every year. In the northwest we can grow practically every species and

variety in the world. In the east the Chinese and Japanese must be grown because the blight kills off other varieties.

EUROPEAN VARIETIES

Bowman Unknown French variety but the best that I have found in the northwest for bearing, growth and quality of nut.	4-6 ft. trees 1.00; 6-8 ft. trees, each.....	1.25
Quercy A standard French variety that does very well here.	4-6 ft. trees 1.00; 6-8 ft. trees, each.....	1.25

AMERICAN SWEET CHESTNUTS

Progress, Fuller and Champion These are standard varieties with large nuts for the American and high quality.	4-6 ft. trees 1.00; 6-8 ft. trees, each.....	1.25
--	--	------

Hathaway An old variety but first propagated by me. From Michigan. Hardy, fine growing trees. Nuts highest quality, about an inch in diameter.	Trees, each.....	1.25
---	------------------	------

BLIGHT-RESISTANT SPECIES

Chinese Sweet High quality, very hardy,	4-6 ft. trees.....	1.00
Japanese Grown from very large nuts. Trees early bearers.	Trees 3-4 ft. Some bore this year. Each.....	.75

PERSIMMONS

In the northwest we are, we believe, the only propagators of the persimmon varieties, either oriental or American. Buy our grafted trees. Do not take seedlings when you want the large seedless varieties grown by the Chinese and Japanese for hundreds of years.

ORIENTAL PERSIMMONS

Fuyu Large fruit, never astringent.	Tree 4-6 ft. each.....	1.50
Tamopan Very large fruit, 3 to 5 inches in diameter. Very hardy.		
Fruit good when soft.	Each.....	1.50
Honan Red New this year to our nursery but old in China. Fine colored, medium sized fruit. High quality, early.	Each 1.50	
Lotus A small fruit, black sometimes called Chinese date. Sweet, good heavy bearer.	Seedlings only, each.....	.50

AMERICAN PERSIMMONS

People who knew these in the east call them the highest quality of all. We have some of the largest grafted.		
Lambert Fruit about two inches in diameter.	Trees 4-6 feet.	
Each		1.25
Early Golden Early, yellow fruit.	Trees each.....	1.25
Seedlings Small size.	Each .25; 4-6 ft., each.....	.75

HYBRIDS

Kamakawi Cross of European and Asiatic. 4-6 ft. trees 1.25

HICKORIES

The hickory is the great American nut and usually classed as the world's finest flavored nut. Hickories are wonderful ornamentals, especially in the spring as the buds come out. They are slow and difficult to produce.

Glover Classed as one of the best cracking of all hickories. Meats come out easily. 4-6, eight-year-old trees each.....3.00

Manahan Also one of the best hickories ever found. Thin-shelled. Cracks easily. 4-6.....3.00

Hales One of the thinnest shelled of the hickories. Fine, fast grower. Each, 4-6 ft.....3.00

HICCANS

The hiccans are hybrids of the pecans and hickories, nuts like the pecan.

McAllister This is a hybrid of the pecan and hickory with a very large nut. Thin-shelled, cracks out easily. Some call it the finest nut in the world. Each, 4-6 ft.....5.00

Marquard (or Burlington) Comes from near Burlington, Iowa. One of the hardiest of the pecan nuts. Has borne near Portland. Each, 4-6.....3.00

PECANS

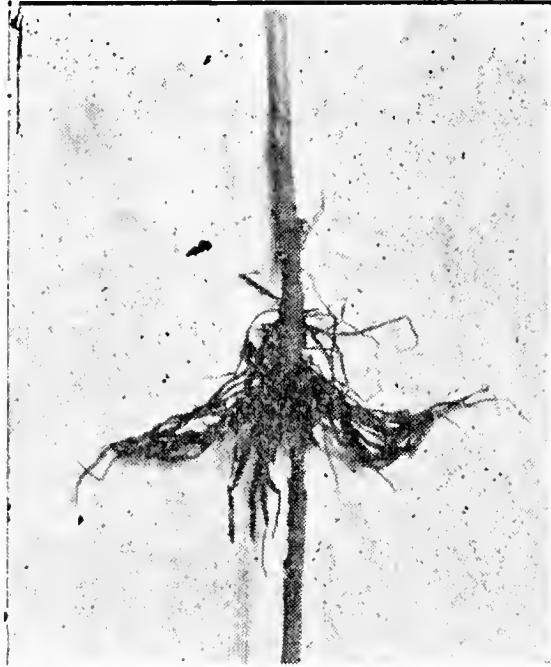

Pecans We have seedling pecan trees from seed from Indiana native trees. Very hardy. Thin-shelled nuts. 3-4 ft. trees .50; 4-6 ft. trees.....75

OTHER NUTS

Pistachio This old nut from the orient seems to grow well in the vicinity of Portland. The nuts bring a high price. Trees attract attention by their beauty. Small trees .50; 3-4 ft.....75

Butternuts A few grafted varieties at 1.50 per tree. Seedlings, 6-ft trees, 5 years old.....1.00

Gingko	Maidenhair tree from China. 3-4 ft. trees.....	75
Almonds	A variety that bears well here where few varieties bear. Fine nuts.....	40
Chinese Pistachio	Grown only as ornamental. Red leaves at end of branches all summer, very attractive. Just introduced in northwest.6-ft. trees, each.....	2.00

Round Root Layer as it comes from tree.

WALNUTS

Franquette—This is the variety of English walnut that makes up the famous groves of the Northwest. It also does fairly well in the Eastern states. These we have grafted onto California black stock for west of the Cascades and on eastern black stock for the colder sections.

5-6 feet, on eastern black, \$1.50

THE KING FRANQUETTE POLLINIZER

Seven years ago we came to believe that a seedling tree in the King Heights Orchard was increasing the yield of the Franquettes about the tree, as for several years over half the crop of the ten acres was on the two acres about this seedling. By bagging blossoms we found it did pollinate the Franquette. Later Federal authorities, after several years experimenting, were able to report that walnuts

blossoming after the Franquette extend the pollinating season and increase the crop, especially in years when rain and other conditions prevent the Franquette from pollinating itself in good shape.

In the King Pollinizer we have a tree blossoming after the Franquette, ever since coming under our observation. Other pollinizers have been found to vary their blossoming time and are therefore unreliable. The King has a nut similar to the Franquette and sells with it, requiring no hand sorting. It ripens at the same time and does not require a separate picking and drying. It has a very long catkin with more than the ordinary amount of pollen. The catkin remains on the trees a long time. All of these qualities make this the finest pollinizer discovered.

Trees, 4-6 feet, each.....\$5.00

BLACK WALNUTS

The black walnut is the world's best cooking nut. There are now many grafted varieties selected for their thin shells, quality of meat and bearing of the tree. We offer two of the best.

Thomas—The nut is large with a comparatively thin shell. Tree a fast grower, early bearer and very hardy.

6-8 ft. tree, each.....\$1.50

Stabler—One of the thinnest shelled of all black walnuts.

Trees, 6-8 feet, each.....\$1.50

CHINESE WALNUTS

In the Chinese we have one of the hardiest "English" walnuts that grows. Trees are growing in Iowa where other English walnuts kill back to the ground while these are uninjured. Seed nuts for these trees were imported from North China where they were gathered by seed collectors.

Seedlings, 4-6 feet, each.....\$1.00

HEARTNUTS

Heartnuts are varieties of the Japanese walnut. The nut takes the unusual shape of a heart and it cracks with the meat out whole. It is a rich nut highly esteemed by many. Difficult to propagate. This year we have but one variety, the Lancaster. Trees of the heartnut are said to be hardy as far north as Winnepeg, Canada.

Trees grafted on Iowa black stock, 4-6 feet.....\$2.00
